

The 450mm Extension Bolt has been created from a normal B85C450mm bolt.

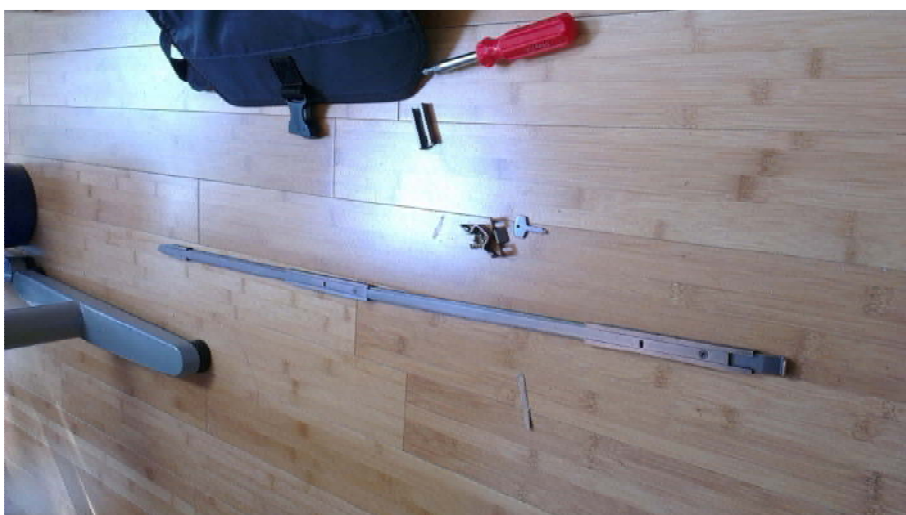

The nose of this bolt has been machined to remove material from its surface.

Using a normal B85C450BZ bolt ensure the case of the bolt is orientated into the non-key locking position.

Insert the machined nose part of the bolt into its mating part and join with the screw provided.

The total length of the bolt is now approx. 36".

Both 45mm channels can be used or just one at the nose of the bolt.
